## The Non-Consolidated Frequency List (NCFL)

The latest versions of the CAFL and NCFL plus a few articles are also available in a paperback book called *The Electroherbalism Frequency Lists*. [Click here](#) or [on the bookcover picture below for details](#). Note that there is nothing in the book which is not also available on this website. The book includes the [CAFL](#), the [NCFL](#), the [CAFL Cross Reference](#), an Introduction to Bioelectronic Therapy Devices, James Bare's "Understanding Our Frequencies Through Harmonics Associations", and "Electrical and Frequency Effects on Pathogens."

See the [Introduction to the Frequency Lists](#) to view notes and explanations of terms used in the CAFL and NCFL.

**The NCFL is available in both PDF and text format. Text is included below, or click on the link to view the PDF version, which is well formatted, unlike the text..**

#### **NCFL v2007-05-16**

The Non-Consolidated Frequency List, or NCFL, is a compilation of frequency lists from many different sources. Some sets are excluded from this compilation such as the Keelynet and Crane lists which merely specify for almost every ailment the general frequencies of 728, 784/787, 880, 5000, 10000, 800, 20. These frequencies are important and many people run them with every set as an adjunct.

The NCFL contains some frequencies and other information not included in the CAFL, including empirical muscle frequencies, mineral and metal frequencies, Hulda Clark's original frequencies converted into audio range, frequencies of musical notes, and lists of "codes" for function generators which hide the frequencies from the user.

#### Mid 1990's Rife Researchers' List

The following was posted by an anonymous contributor to one of the early rife lists and is a compilation of what James Bare, Don Tunney, and Hulda Clark were using in the mid 1990's. The following is the verbatim introduction: "Here is a list that I've compiled. The format is frequency, what it supposedly affects, device, source. If the 'device' field says 'theory' it means that someone said this might work, but no-one has actually said anywhere that they've used it. If the 'device' field says 'theory/440' then I took the frequency from Hulda Clark's book "The Cure For All Diseases" and divided by 440."

**MORs (Mortal Oscillatory Rates)** - This short list includes Rife's original frequencies that he used during several different time periods of his life as well as 1950s era Crane frequencies and Oxyrife's modern frequencies. Crane frequencies are square wave, Rife's and Oxyrife's are sine wave. For Pre 1935, Rife's frequencies are provided in both frequency (hertz) and wavelength of super regeneration (meters), and then the wavelength converted to frequency.

## Notes:

1. Frequency codes 14, 16, 17, 20 and 28 affect more microbes and conditions than all other frequencies

combined.

2. The second most effective group of frequencies is; 29, 42, 45, 48, 58 and 86. These are mainly used for parasites and amoebae.

3. Frequencies in the range of 11 to 29 produce the most rapid response, usually within 6 hours.

4. Frequencies in the range of 60 to 85 are those that seem to occur naturally in the brain. It is thought that behaviour can be influenced with harmonics of those same frequencies during behaviour of the opposite type. For example, to reduce/eliminate anger, one would apply a freq. of 6.3 Hz (code# 71). See comments for those ranges.

5. Any good quality square-wave generator, such as those recommended for use with the James Bare Rife Device, should be able to output most or all of the Actual Frequencies listed in this document.

Following is the frequency set, in Atelier Robin function generator format, for *Fur Elise* to be “played” on a plasma tube device that can be heard when operating in the 1000-3000Hz range. It starts with the first note for an additional 10 seconds to allow a short time for the device to be tuned when it is first started. It ends with 3 minutes of 1760Hz making the total time 212 seconds.

**Hulda Clark Frequencies**

Hulda Clark frequencies, as published in her books such as *The Cure for all Diseases*, are all above audio range - from 71KHz to above 1MHz. They are specified by her to be run on a sine wave frequency generator. Plasma tube devices like Rife-Bare or EMEM cannot run these frequencies directly. One way to convert the frequencies for use on an audio range function generator is to repeatedly divide by two until they are in range. Another method, reported by Jeff Sutherland to be more reliable, is called Scalar Harmonics. This is to divide the frequency by e raised to the 3rd or 6th power where e equals the natural logarithm constant, also known as Euler’s Constant, 2.71828183. The following list uses e raised to the 6th power (S6) to perform the calculation since all the results are below 10KHz. Clark’s frequencies are typically provided as a range (high and low) plus a “use” frequency in between which is specified by her to be the most effective.

On pathogen names appended with \_1, \_2, \_3, etc, Clark provides more than one “use” frequency and all of these should be used. Sets annotated with 2nd, 3rd, 4th, etc, indicate she found more than one range for the pathogen. This list is provided on the Electroherbalism website where the S3 scalar harmonic frequencies are also included.

**Tapeworm Frequencies.** Tapeworms are segmented. The first segment is the head, called the scolex. Tapeworms grow by adding a new segment to their body. Tapeworms can have very large bandwidths (range of frequencies), and it varies by the length of the specimen! It is as if each new segment has a unique, and slightly lower, frequency. Do not use a frequency generator to kill tapeworms. If you accidentally kill middle segments instead of working your way up from the bottom, you may conceivably promote dispersion! Use only a zapper. (Editor's Note: By this, Clark means to use only a device producing a pulsed DC square wave (not an AC sine wave) output. It should be fine to use a square wave generator sweeping the lower to upper range)

**The following list was researched by Dr. Toshihiko Yayama in Japan. He used the F-Scan with reagents and patients with known metal poisoning.**

Frequencies have been rounded to the nearest 100 Hz. To test for metals, a DIRP is done from 30,000-60,000 Hz in 100 Hz steps. The mercury frequency has been confirmed by others. These frequencies are intended for research in detecting the presence of metals. They are not intended for use as treatment. Treatment should include chlorella and other materials as needed.
